

Healthcare

Let Chip PC take care of IT

Chip PC & Healthcare

Chip PC desktop solutions are a perfect fit for healthcare due to their unique, compact form factors, superb support of digital imaging, high performance and compliance with harshest security & HIPAA standards requiring protection of patient data and complete manageability. Chip PC products are a natural choice for various healthcare organizations worldwide, including private and public hospitals and clinics, serving faithfully patients as well as medical and paramedical personnel. Chip PC products provide new installation options as Point Of Care, including exam rooms as well as patient rooms.

- HIPAA compliance - No local data at client
- Powerful digital imaging capabilities
- Full Electronic Medical Record (EMR) functionality
- Point of Care solution - Direct data retrieval and entry
- Physician Order Entry (CPOE) solutions
- Elimination of secondary charting or transcription operations
- Broad variety of authentication - Smartcard, Single Sign on
- Domain Authentication - User's profile follows user to any Chip PC device
- High Integrity - 100% virus-immune via Digital Signing Software
- Efficient and fast physician sign on & authentication

Why Chip PC Solutions?

Chip PC patented technology introduces the world's smallest thin clients, offering strong performance and superb multimedia capabilities and connectivity to Microsoft Terminal Server as well as Citrix, VMware and Legacy servers.

Chip PC remote management software, the Xcalibur Global, provides a scalable, policy-based control for thousands of clients and users, making Chip PC thin client deployment and maintenance a real plug & play solution.

With great performance, high security and easy deployment and management, Chip PC thin clients are the clients-of-choice for companies and healthcare organizations all over the world.

- Unique form factor thin-clients: Network port-embedded Jack PC, Compact Plug PC, Desktop form factor Xtreme PC
- Managed via MS Active Directory integration
- 100% virus-immune & data-secure
- Total physical security
- Quiet and unobtrusive
- Low Power consumption - 3W operating

about Chip PC Technologies

Chip PC Technologies drives innovation into reality as a global technology leader in desktop virtualization and server-centric computing. Headquartered in Israel with offices across Europe and the US, Chip PC Technologies focuses on developing and manufacturing innovative desktop computing solutions covering the complete spectrum from smart user desktop devices to Active-Directory-based management software.

Dedicated to innovative desktop computing, Chip PC Technologies in-house strong R&D teams enable the company to be at the forefront of technology. Targeted at solving the thorny problems of management, security, reliability, maintenance and costs of desktop computers, the company's technology constructs a ground-up solution of innovative clients orchestrated by intelligent management of users and devices, scalable to tens of thousands of clients. Technological leadership is further leveraged by the company's strong bond with its Premier Partners, Microsoft, Citrix and VMware

Leading the way to Computing with a Conscience, Chip PC Technologies enables companies to adopt greener computing practices by offering highly environmental friendly devices with nearly zero power consumption of 3W at full work mode!

Chip PC Technologies customers reach is global, featuring a strong channel of valued added partners worldwide. The company's customer base is global and constantly growing, including thousands of leading companies in Healthcare, Banking, Retail and Government - to name a few strategic verticals, in which we deliver compelling return on investment

Quoted on the Tel Aviv Stock Exchange, Chip PC Technologies has been selected by Deloitte as one of Israel's fastest growing technology companies with its income growing more than 250% in the past few years
